

IDRON (NPK) B.T.C.

14-7-21 + ME

HIGH SOLUBILITY, LOW pH AND CONDUCTIVITY STIMULATES A BALANCED PLANT DEVELOPMENT

The IDRON LINE is a complete range of water-soluble fertilizers intended for fertigation of all crops and especially those in greenhouse and those having particular nutritional requirements. The high purity of the raw materials used, ensures excellent and complete solubility. The presence of MIX K, a particular complex of chelated microelements and adjuvants, improves the solubility and lowers conductivity. In addition, it reduces pH values, promoting an intense acidifying action of the soil/substrate. These characteristics make the IDRON LINE the ideal choice for effective fertigation, suitable for any fertigation system, without problems of stock solution sedimentation and clogging of the drippers.

IDRON (NPK) B.T.C. 14-7-2 + ME is the fertilizer of the IDRON LINE characterized by a ratio between macroelements (NPK) of 1 : 0,5 : 1,5. This makes it particularly suitable for fertigation of any crop, from the early stages of the cycle to ripening. The high potassium content is balanced by the presence of nitrogen, ensuring an efficient plant metabolism at the vegetative level.
